

SpeedyPOS Retail Point of Sale Software

The Perfect Solution for Retailers

SpeedyPOS Retail POS Software

Overview

SpeedyPOS is specifically designed for the small, independent retailer who needs an affordable, accurate, easy to install and easy to use Point of Sale (POS) program, but still wants to retain their existing accounting system.

For businesses wanting integrated accounting, SpeedyPOS PLUS offers this along with other advanced features.

Instantaneous System

SpeedyPOS retail POS software helps you run your business - not just report on it. With just one touch or click SpeedyPOS automatically and in real-time:

- ✓ Processes Sales Information
- ✓ Adjusts Inventory Balances
- ✓ Records Customer Information
- ✓ Records Accounts Receivable Information
- ✓ Evaluates PO Requirements

All of this quick attention to detail offers you improved profits, reduced costs, a lower workload, increased inventory control, and increased security.

Improve Customer Management

Beyond improving your customer's store experience by providing a fast, accurate, professional checkout, SpeedyPOS also:

- ✓ Increases customer loyalty by keeping track of their personal 'details'
- ✓ increases customer purchases by enabling staff to recommend products similar to past purchases
- ✓ Improves account accuracy by communicating specific customer account details to staff via automatic personalized screen messages

Improve AR Performance

As well as automatically posting sales and payments to accounts through the checkout screen, SpeedyPOS also allows you to post payments directly to accounts. Additional AR features help you to:

- ✓ Improve cash flow by staying on top of accounts in real-time
- ✓ Limit credit risks with automated warning messages for staff
- ✓ Limit credit risks by requiring supervisor overrides for accounts past their credit limits
- ✓ Improve cash flow by printing account statements in real-time

Improve Purchase Order Process

When SpeedyPOS adjusts the inventory balance at the time of sale - it also checks the high and low inventory levels to determine if product needs to be ordered. If an item needs re-ordering SpeedyPOS automatically generates suggested purchase orders for your approval. Automatic tracking of your purchase order needs means:

- ✓ Reduced chance of missed sales due to product outages
- ✓ Improved supplier relationships
- ✓ Reduced costs due to fewer 'emergency' orders
- ✓ Improved cash flow

SpeedyPOS Retail POS Software

Improve Your Sales Process

With full barcode, scanning and touch screen capability - SpeedyPOS simplifies the checkout process as well as:

- ✓ Increases accuracy
- ✓ Reduces customer wait time,
- ✓ Reduces sales processing time, and
- ✓ Improves customer store experience. Not quite ready for touch screen? SpeedyPOS Retail POS Software works great on traditional PC monitors, too.

Increase Security

With SpeedyPOS your staff will only be able to see and perform the functions you select for them.

- ✓ Improve security by directly controlling system access
- ✓ Reduce errors by limiting access for un-trained personnel

You decide whether a sales person is experienced enough to have access to voiding a sale, discounting at the till, or any other functions. With SpeedyPOS you can customize access for each member of your staff - ensuring better security and control.

Increase Inventory Control

In addition to automatically adjusting inventory balances at the time of sale, SpeedyPOS Retail POS Software also helps you to:

- ✓ Increase your profits by avoiding over and under stocking
- ✓ Reduce 'loss' through improved inventory tracking
- ✓ Increase profits through cost analysis and management
- ✓ Control pricing with up to 6 different price schedules per item
- ✓ Maximize profit by ensuring discounts remain profitable

SpeedyPOS: Point of Sale

The Point of Sale module in SpeedyPOS has been designed to be fast and easy. With the use of a barcode scanner you and your staff can complete sales in only seconds. SpeedyPOS has been carefully designed to be fast and easy while not making sacrifices of either features or power.

Making a new cash sale

Creating a sale in SpeedyPOS is so fast and easy! SpeedyPOS can be set up to accept all types of tenders: Master Card, Visa, AMEX etc as well as Cash, Cheque and Debit. The sales screen can be configured to suit your business, reducing wherever possible the number of unnecessary keystrokes between sales.

In the optimal configuration a sale can be completed, from start to finish, including adding items with a barcode scanner and taking payment, in only three keystrokes. With a final fourth keypress the next sale is started and the system is ready to add new items to the next invoice.

SpeedyPOS Retail POS Software

Making a layby sale

Laybys are a common occurrence in many retail environments. SpeedyPOS allows you to process a sale as normal, but then gives you the option to finalise it as a layby. You can take a deposit on the layby and record the details of the customer which can then be used for reporting on what outstanding laybys you have.

Simply create a normal sale and select 'Layby'. If the sale is not already assigned to a customer you can quickly do so by finding or entering a customer account. If you normally take layby deposits you are given the option to do so, and then a receipt is printed. Later you can easily print reports of all your incomplete layby sales.

Making an estimate or quotation

SpeedyPOS allows you to enter Quotations using the customer and stock items on file. Quotations will have no effect on the stock on-hand, customer balances or other financial reports. However, when the customer decides to make the purchase, you can convert the Quotation into a sale without having to re-enter all the data.

Adding or editing customers on the fly

When making a new sale, you can click on the 'new customer' button to create the customer account right then and there. This is a great way to capture valuable sales, marketing and demographic information, and also can help in tracking warranties and returns if a customer should lose their receipt.

In normal use you'll be searching for existing customers more often than creating new ones. Searches are immediate and easy - simply start typing the customer's name and a list will appear, narrowing as you type, until the customer is selected. If you have several customers starting with the same letters, you can search by different criteria with the 'find customer' button. Searches by address, phone number, post code and many other data are possible.

In addition, you can edit the existing customer without exiting the sales screen if you need to update their account, and you are able to view their purchase history to help with the current sale. For example, if they want to buy a vacuum cleaner bag and you need to know which model they purchased, you can easily access this history.

SpeedyPOS Features

SpeedyPOS is feature-packed!

With the appropriate level of security, you (or your staff) can view your cost and profit margin before applying a discount. SpeedyPOS can send invoices directly to customers via e-mail or fax.

You can sell stock into negative quantity. We are surprised that some of our competitors don't allow this - we believe if you have an item in your hand the computer shouldn't prevent you from selling it.

Full support for Laybys, Sales on Account and Quotations. No need to re-enter the sales information when changing types, invoice types can be changed on the fly if the customer changes their mind.

We call it Speedy...

In a busy environment the ability to complete sales quickly is paramount, so the SpeedyPOS Point of Sale component has been designed for speed. With only a little practice single item sales can be completed in about three seconds, leaving the clerk free to collect payment.

SpeedyPOS immediately and transparently integrates every sale with the database, so that the results of every

SpeedyPOS Retail POS Software

sale are available to every system on the network as soon as they're completed.

Everyone wins when your point of sale system works correctly and quickly, every time: as a business owner you get accurate and immediate results, your sales staff are free to provide better service, and your customers - not the computer - get the attention they deserve.

SpeedyPOS Peripherals

SpeedyPOS supports most standard POS Hardware devices, from almost every manufacturer. Improve your sales processing speed by using:

- ✓ barcode scanners
- ✓ receipt printers
- ✓ electronic cash drawers

We don't include a device-compatibility list because SpeedyPOS works with just about everything. When a device is found that doesn't work with SpeedyPOS, we usually change the software to support it. If you have questions about your existing or future hardware and SpeedyPOS, please feel free to ask us.

Customers Relationship Management

Customer Information and history is a high priority with SpeedyPOS. Keep track of a customer's name, address and phone number, e-mail address, web addresses, price schedules, warning comments and other bits of important information in the customer file.

Feature Packed

Easy Searching: You'll never have trouble locating a customer's account. SpeedyPOS lets you find the customer by phone number which makes for easy searching.

You can also search by account number, city, address, postal code, or the first or last name of any of your customers.

Mailing Lists: SpeedyPOS produces mailing lists based on complex information. For example, you can send Christmas cards to all customers that spent more than \$500 in the last 12 months or send discount coupons to all customers that purchased certain types of items in the last 4 months.

E-mail and Web Addresses: Many businesses now have e-mail addresses and web pages, so we can track that on the customer's front page without having to hide the data inside a comment.

Payment History: It's easy to view a list of your customer's payments. You can either view individual invoices to see the amounts paid on each or you can review the list of all the payments. This is beneficial especially when a customer pays several invoices with one payment.

Warning Comments - Automatic Up-Selling: You can attach up to 200 lines as a warning comment to a customer record. Whenever you start an invoice or edit that customer record, the warning comment will pop up in a big red box. It can be used to remind you to not accept customer cheques, give special shipping instructions, or to call the cops. The warning comment does not have to be negative either. It could remind the staff that the customer prefers and will pay for the high quality items or other customer preferences.

Customer Comments

All customer accounts can have comments attached. These comments have several uses, such as keeping track of sales leads and prospects, customers looking for certain goods, or collection calls. When you enter a comment into the system, that information can be shared with your other staff so that everyone can know the current status of the customer.

Purchase History

The Purchase History brings up a list of all items purchased complete with a reference to the date of purchase, invoice number and amount paid. This helps you to quickly search for a specific part the customer purchased instead of having to review each invoice separately.

SpeedyPOS Retail POS Software

Inventory Control

One of SpeedyPOS' strengths is its ability to track your inventory. It can show you all kinds of reports, make ordering suggestions, help you count your stock as quickly as possible, handle layby items and more. Multiple suppliers, different sizes and colours, non-inventory items (like candies in a jar), multiple comments on items, kits and many other features.

Inventory Tracking

After you have generated some sales SpeedyPOS can examine them and recommend new highs and lows based on the sales volumes, number of days it takes to arrive, and if sales are trending is higher or lower. SpeedyPOS supports several methods of tracking and handling inventory, including integrated barcode capability.

Inventory Control Features

SpeedyPOS offers comprehensive control over your inventory.

- Find inventory by part number, description, supplier, main and sub category lookup and numerous other search options
- Easily see quantities in stock, committed-to laybys and quantities available to sell
- Costing on first in, first out method - reports show weighted average
- List price and 5 extra price levels of different prices for different customers
- Supports bar codes at point-of-sale, receiving and when counting-you can even print your own bar codes.
- Alternate suppliers complete with part number and their price - you can find a part by supplier's part number
- Add extra comments, warning comments, and up-selling tips
- Backorders are well supported

Purchase Orders

Purchase orders are used to order your inventory, either for replacement purposes or for special customer orders. SpeedyPOS makes the job simple by bringing all the information together into one place. For example, while creating a purchase order for a supplier on a specific item, just click a button and check the suggested order levels for all items from that supplier.

SpeedyPOS Retail POS Software

Suggested orders are calculated from the minimum and maximum stock levels, quantities in stock, back orders needing to be filled, and items already on order. If you are short, the system will let you tag and drag those items onto the PO without having to retype them. Of course, you can always create a manual order if you need to.

On Order	To Receive	Item	Desc	Pack Size	Cost Ea	Extra Ea	Freight Ea	Duty Ea	Landed Ea	Expected Status
110.00	110.00	H-123	Pencil	20	\$0.2000	\$0.0000	\$0.0000	\$0.0000	0.2000	
0.00	25.00	HB-SD1	HB Pencil Small Diameter	1	\$0.2000	\$0.0000	\$0.0000	\$0.0000	0.2000	5/10/2006
0.00	30.00	HH-AR2	Another Quality Pen	1	\$0.6650	\$0.0000	\$0.0000	\$0.0000	0.6650	5/10/2006

Accounts Receivable

Accounts Receivable reports show you who owes you money, how much, and how long it has been outstanding, with appropriate amounts in the current, 30-, 60- and 90-day columns. When A/R invoices are entered they are immediately posted to the customer account, and to the aged A/R list.

Accounts Receivable Reports

As an option, you can reprint this report for any time period. This is very important as you might start making new sales in the new and now current month, before being finished with adjustments of the previous month's entries.

Once you have finished the entries for a month statements can be printed and sent to customers, to help remind them to pay you.

Payments

When payments are received, you can specify how much was paid against each invoice. This allows for better control of the system and easier reconciliation with your customers. Of course, Windward offers several shortcut keys to simply pay all the invoices in one fell swoop or to pay invoices up to a given amount.

Work in any month or year

Last Name	First Name	Position	Branch	Phone	Address 1	Address 2	City	State	Postal	Birth Date	Inventory
Smith	Jonathan	Manager	Head Office	(07) 1111 1111	34 Main Street	Unit 5	Gracerville	QLD	4567	d/MM/yyyy	d/MM/yyyy
Peterson	Josanna	Assistant	Head Office	(07) 1111 1111	34 Main Street	Unit 5	Gracerville	QLD	4567	d/MM/yyyy	d/MM/yyyy

You can enter invoices into any month in the current year or previous year, and reprint most reports for any given period. This allows you to continue invoicing first thing in the morning of a new month, even if the back office is not finished charging interest, adjusting accounts and printing statements. Many other systems require that you completely finish a month before being able to start a new month or year.

SpeedyPOS Retail POS Software

Customer Credit Control

When you create or edit a customer's account you can specify their credit limit, in addition to the discount price schedule to use, and charge type. If you try to create an invoice that will put the customer over their credit limit, the system will warn you, and if you do not have the security clearance to override this warning the invoice will not be completed until the account is paid.

Collections

Collecting outstanding debts is never fun, but SpeedyPOS can make the job easier. You can print an aged A/R report, complete with customer name, phone number and a list of outstanding invoices. Optionally, this report can be configured to only include customers with balances older than a certain number of days, such as over 60 or 90 days.

As you contact your customers you can enter comments into SpeedyPOS' built-in appointment scheduler, set reminders for reviewing their account and, if necessary, call them again.

Reports

Point of sale software can often be judged on the flexibility of its reports. It cannot be considered useful if it tracks all the information you give it without giving useful information back. SpeedyPOS has a wealth of useful reports that can give you an accurate view of your inventory.

Report Options

When you generate reports in SpeedyPOS you are given several printing options. In addition to selecting the best printer for the job SpeedyPOS will allow you to export the report as a .CSV, .XLS, .PDF or plain-text file. SpeedyPOS will also give you the option of emailing reports directly to a customer or supplier (or any other email address), and with the proper software (WinFax or ZetaFax), you can send digital faxes, without leaving SpeedyPOS or wasting paper.

Many of these reports offer significant additional flexibility. Graphing and customization options are available that will offer you greater control over the report, and how it's presented. You can select what data is displayed, and in what order, so reports contain exactly what you need to see.

SpeedyPOS Retail POS Software

Data Security

Data security is a vital consideration, but unfortunately it is often overlooked. There are three important aspects to ensuring the data security of your business:

1. Password access: controlling who can access what parts of the system
2. Data Stability: protecting data from system crashes
3. Data reliability and accountability: fixing mistakes and tracking changes

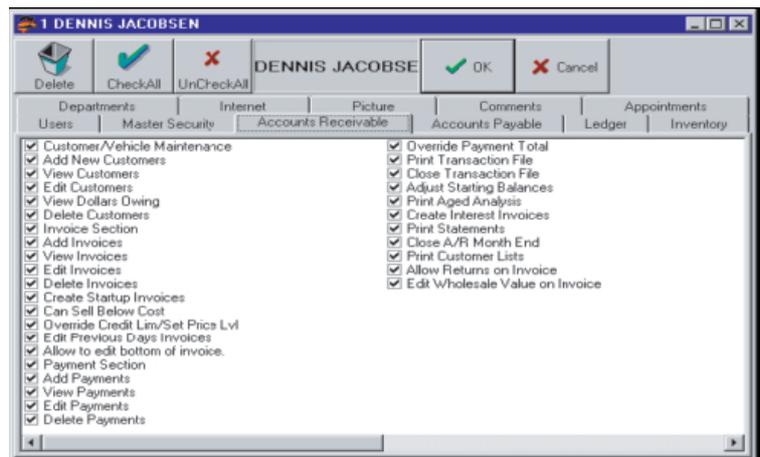

In all of these areas SpeedyPOS has you covered.

Permission Security

Access security is a critically important feature of any software, and SpeedyPOS has implemented it at every level. Every user is issued a password, and their access to all areas of the system is dictated by the clearances you assign their password. Access privileges can be controlled for every function, allowing you to grant access to functions for your staff need to do their jobs - and no more.

For example, users can be set up to allow them to perform front-end functions, such as creating sales and invoices, and

inventory inquiries, but keeping them out of the sales and profitability reports. Users can also be authorised to view but not edit certain information. Access control is easily handled through an intuitive security panel.

Data Security

SpeedyPOS provides many sophisticated tools for data recovery in the unlikely event of a system crash, power outage or other unscheduled interruption. Often these tools can allow you to continue right from where you left off instead of having to re-enter the days work. SpeedyPOS offers a layered approach to data security too - we don't rely on just one method, but several different techniques that overlap each other. If one fails another will usually catch it.

Audit Trails

SpeedyPOS includes the best of two worlds, offering the ability to edit your data, and track the changes made. If you make a mistake you can easily adjust it, correct invoices, payments, bills or cheques. To protect your business all transactions are posted to a secure audit trail that will report the date, time, terminal number, user, invoice number, customer name and dollar amount for each transaction. This gives you the ability to fix mistakes and helps prevent fraud. (*SpeedyPOS PLUS only*)

SpeedyPOS Retail POS Software

SpeedPOS™ PLUS - Overview

SpeedyPOS™ PLUS Retail POS Software provides the Point of Sale System, Independent Retailers need to:

- Increase Sales
- Improve Cash Flow
- Reduce Costs
- Control Inventory
- Manage Customers
- Increase Security
- Reduce Loss

All the great features from SpeedyPOS are included PLUS:

Accounting

In SpeedyPOS PLUS the accounting is built in, not bolted on. It's all part of the same package, so when you receive inventory, make a sale or edit your costs the entire system is updated with new data. You don't have to post anything, make a batch process or update another piece of software, it's all done immediately and accurately.

Customization

SpeedyPOS PLUS allows great freedom to present your business the way you want. As a standard feature SpeedyPOS includes a comprehensive form designer to tailor the appearance of your printed pages, including invoices, work orders and purchase orders. You can add your own logos, change fonts, and arrange the location of every data field so that it looks just the way you want it to.

You can also rearrange the screen. Like SpeedyPOS, SpeedyPOS PLUS supports touchscreens and will allow you to rearrange the screen so the buttons you use most are where you need them to be.

SpeedyPOS PLUS also supports a range of label and barcode printers, and the built in label designer lets you design the perfect label.

Auto Price Updating

SpeedyPOS PLUS can update all your prices in one easy operation. If you need to raise or lower all the retail prices in a category (or range of categories) you can easily do this. Simply enter the amount or percentage to adjust by, and it will instantly be done.

E-Commerce

SpeedyPOS PLUS comes with an XML Export facility, which gives you another method for exporting your data. This, combined with the optional ECommerce package, gives you a one-button export for your inventory and customer data. In one smooth operation your data is exported, compressed and automatically uploaded to our E-Commerce system. From here customers can browse your inventory, make purchases and - with just one more button press - these sales are downloaded directly into SpeedyPOS PLUS where they can be completed.

Data Loading

To save time when you're first installing SpeedyPOS PLUS it's easy to convert any CSV file or Excel spreadsheet into inventory data. Tedious entry of parts and categories can be completely avoided, getting you up to speed in the shortest possible time.

Integrated Accounting

SpeedyPOS PLUS has a full-featured accounting package built in. It's not tacked on as an afterthought, nor is

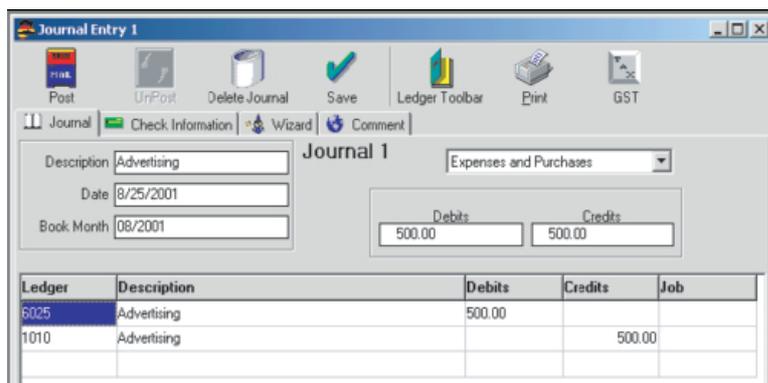

SpeedyPOS Retail POS Software

the point of sale component tacked on to an accounting package. From the very start SpeedyPOS PLUS was designed around a single, robust database. There are no batches to run, and you never have to wait to get up-to-the-minute reports. As soon as a sale is completed, its details show up across the whole system.

Accurate Numbers - All the Time

With a year-end, once you have entered all your information, you must pass on the reports to your accountant for their magic touch: depreciation, tax calculations, forms to be filled out and submitted to the government. By the time you're done, it could be six months down the road.

Believe it or not, most competing accounting systems do not properly allow you to report on your business for past months or years. Some will allow you to enter the data, but when it comes to reprinting an accurate set of financial statements for a given point in history, most fall flat on their face.

With SpeedyPOS Plus, you can reprint an income and expense statement for any month, in any year at any time - or reprint a balance sheet - or an aged accounts receivable - or payables report.

This is not trivial. When you reprint an aged payables report for the previous month, their system ignores bills and cheques entered in the current month showing the true condition for the end of the previous month.

What this means is that you can do your work daily and never get behind yet still get the reports you need. We have witnessed many people using other software packages piling up the work on the corner of their desk until they are finished with a month end and then frantically playing catch up.

SpeedyPOS Plus comes with several pre-built ledger reports, such as a balance sheet, income and expense statements and more. It also come with its own ledger report writer, so you can build your own reports, to (for example) compare income this year to last year and the year before, or income to budget, or compare different areas of your business, such as the service side and parts sales side.

40 Year History

We know you don't need 40 years of history, but many programs erase your data after your year-end. Some generously give you a extra month (13th month) to clean up your year-end before purging your data. With Windward, YOU decide when you no longer need the data. Many products are now sold with 10 year warranties, so we suspect you'll want to keep your data online for at least 10 years.

SpeedyPOS Plus keeps track of your business for the current year, previous year, and many years previous. This allows you to easily compare how you are doing this year to other years. Every invoice and transaction created is stored in it's original form with all its detail.

When journal entries are required, they are simple and easy to use and are based on standard, double entries where the debits must equal the credits. However, if you've made a large entry and it doesn't balance, Windward will allow you to save it without posting and return later to finish it off.

Recurring Entries

SpeedyPOS Plus will allow you to copy recurring entries into future months so that you don't have to post the same entry over and over each month, or possibly forget to post an entry. You can post forward into any month in the year and even post into next year.

This can be used for insurance for example. Let's say you pay \$1,200 for insurance for the year in July. Is this really a July expense for \$1,200 or are you in fact spending \$100 per month and just happened to pay the bill in July?

From an accounting point of view, it's best to expense a little of this each month so that you can accurately gauge how much it costs to run your business monthly. To do this, you would post the \$1,200 to prepaid

SpeedyPOS Retail POS Software

expenses as an asset (something you own that is of value to the company) and then remove \$100 from prepaid expenses, and post to insurance expense each month. In Windward, you can create the entry for one month and then copy it to the other 11 months, saving you time and effort.

Cheque Writing

Normally, you will enter your bills and cheques into the accounts payable system, but for one-off cheques for a vendor, you will never deal with again, that is too much work. SpeedyPOS Plus will allow you to create and print cheques directly from the journal entry in a simple one-step method. SpeedyPOS Plus can print to any kind of cheque, so you don't need to purchase new ones. Just use the form designer to set it up.

Profit and Loss Statement

The income and expense report, also known as the profit and loss statement, will detail the amount of income and expense for each ledger number, both for the current month and a year-to-date total. Using the SpeedyPOS Plus ledger report writer, you can build your own reports to compare this year to last, and the year previous and other reports important for your business.

Balance Sheet

The balance sheet report will show you your assets, liabilities and owner equity. This is the bottom line that your accountant and banker look for to analyze the health of your company. By viewing this, you can see the dollars in your bank, accounts receivable and inventory on hand, among other details.

SpeedyPOS PLUS: Accounts Payable

A robust accounts payable module is included as a standard part of SpeedyPOS PLUS' integrated accounting. Keeping tabs of your outstanding invoices with suppliers shouldn't be complicated, so SpeedyPOS PLUS makes it easy.

Payables

When you receive inventory, the total amount of the purchase is posted to just one ledger number. The inventory being received is listed and detailed in the purchase order module, so there is no need to duplicate this information.

If you negotiate payments in installments such as 3 equal payments, SpeedyPOS will track those distributed due dates, remind you when you need to pay the bill, and how much to pay. In Australia the GST input tax credits are entered on the bill, and the system warns you if you forget to enter these tax amounts.

While entering accounts payable bills, the prices on the original purchase order can easily be cross-referenced to ensure they are correct and that you have received the goods.

Buying Group Support

SpeedyPOS PLUS fully supports buying groups, where you can order from a supplier but pay the buying group. When you use the buying groups feature, you'll be able to report on all the purchases from a given supplier, even if you don't owe them any money, and be able to look at the buying group from a financial point of view to see what you owe.

You can use this capability if you purchase goods with your credit card. In this case you buy from a supplier but pay your credit card company.

Cheque Handling

If you are entering information from a previously handwritten cheque, you can do that without having to print them a second time. After creating a cheque, you can choose to post-and-pay it, or hold it for batch-printing

SpeedyPOS Retail POS Software

all your cheques later. This lets you spend some time setting up the cheques, then load the cheques into the printer and print and post the batch in one go.

Timed Payments

In some cases, you may get a large shipment of goods from a supplier and be allowed to pay in monthly installments. SpeedyPOS PLUS allows you to do this easily, with payments distributed over a maximum of ten months. This information is combined with the cash requirement report to determine which bills should be paid.

Customer Loyalty

Once you have set up your loyalty and promotions systems SpeedyPOS Plus' POS module will automatically assign any points, discounts, "2 for 1" offers that you have set up.

Gift Cards & Certificates

Gift Cards have been proven to be a great way to increase profits (on average only half of gift cards purchased are ever redeemed). When a Gift Card or Certificate is sold through SpeedyPOS Plus' POS, the certificate will be automatically printed and put into circulation. Alternatively, if you want to use "pre-printed cards" the card only needs be scanned, and it is made active.

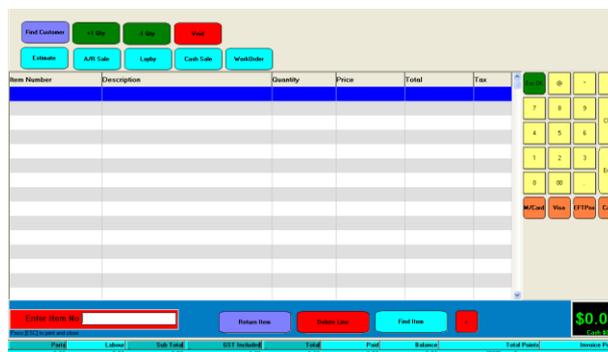

Redeeming Gift Card and Certificates is just as easy. Scan the items, scan the gift certificate, print a receipt, and you are done. If there is any amount left over on the Gift Certificate, System Five can even optionally re-print a new certificate with the remaining balance. How easy is that!

Other Features

Touch Screen Designer

SpeedyPOS Plus now gives you the freedom and flexibility to create your own touch screen layout. The easy to use "drag and drop" editor makes it easy to create buttons for items, groups or to simply create a custom point of sale interface.

This is a great feature for businesses that sell products that do not have barcodes. With the price of touch screen technology dropping rapidly, implementing a streamlined touch screen POS solution into your business is now more affordable than ever.

Invoicing

Often businesses have both a retail and wholesale side to their operations. Whilst the principle of how you sell items to these two types of customers is similar, there are some differences. SpeedyPOS Plus' invoicing feature gives you a more detailed look at the sale. You would typically use this feature, if you had to sit down to work out the details of the sale, as opposed to making an "over the counter" sale to a walk in customer.

SpeedyPOS Plus E-Commerce System

The SpeedyPOS Plus E-Commerce System (SPECS) is our industry-leading, integrated E-Commerce solution. It interfaces seamlessly with System Five & SpeedyPOS Plus and offers one-touch import and export to and from the web server.

SPECS effortlessly handles all the basics of E-Commerce. Sites can be created easily using our comprehensive set of customized data tags and modular, online construction system. There are virtually no limits to the way a Windward E-Commerce site can look, allowing a SPECS site to look the way you want it to.

SpeedyPOS Retail POS Software

Navigation & Design:

Customers can search for products, or browse through category and sub-category listings. Through a combination of dynamically updated listings and hard coded directories navigation can be accomplished in virtually any fashion. A powerful but easy set of commands allow on-the-fly layout changes based on nearly any criteria.

Cart System:

SPECS includes a built-in shopping cart, which can also be designed to nearly any specification. Items can be easily added to the cart, and from the cart itself the user can adjust quantities, delete the parts or 'check out' and make a purchase.

Inventory:

Using the one-touch data upload from SpeedyPOS Plus all the inventory that should be uploaded will be, including prices, stock quantity, description, special attributes and keywords, and more. Out-of-stock parts can be displayed or hidden as desired. Items with a size or colour (or other attribute) matrix are also fully supported.

Customers:

Customer accounts can be updated online, and will update SpeedyPOS Plus automatically. Multiple logins can be assigned to customers to allow easy, accountable corporate transactions. Separate billing and shipping addresses, up to twelve different pricing levels and many other features provide the power and flexibility offered by all Windward products.

Hardware Requirements + Compatibility

SpeedyPOS is a very flexible package. It can be set up in many different configurations, with different PC and peripheral hardware. It is because of this flexibility that it can be difficult to suggest a cure-all configuration to suit every need. We are always available to answer any questions you may have about your existing or future hardware's compatibility with SpeedyPOS.

SpeedyPOS can be setup on a single workstation, or a small peer-to-peer network of two or three computers.

SpeedyPOS is compatible

The Computer

Faster is better, but we recommend a Pentium III - 350 Mhz or faster, with at least 256MB of RAM. You'll need at least 100MB of harddrive space, however this requirement will grow as you add more inventory and make more sales. We recommend that at least 1GB be available to SpeedyPOS.

General Printers

Laser printers are the best option because they are quiet, fast and can print very clear images, like your company's logo and letterhead. SpeedyPOS also supports most dot matrix, ink jet and bar code printers at no extra cost, and without any additional software.

Docket Printers

There's a wide variety of docket printers available, and SpeedyPOS supports just about all of them. As a rule if your docket printer is Epson compatible (And 95% of them are) it'll work fine with SpeedyPOS. And if you've connected your cash drawer to your docket printer (this is how most cash drawers connect to your system) SpeedyPOS will also open your cash drawer when you've completed a sale.

Network Cards and Switches

We recommend 3-Com network cards due to their superior quality and grace under pressure. Low-end and
